

DENTISTRY

Dr. Jeff Danner

I often have bad breath. What can I do about it?

There are countless over-the-counter products for fresher breath. However, what most people do not realize is that many of these consumer products:

- **Only hide bad breath temporarily instead of actually eliminating it.**
- **Contain alcohol, which can dry out your mouth and lead to more bad breath.**

It is important to have fresh breath and feel confident about it. I recommend a line of products exclusively available through dental offices. These products are alcohol-free and help eliminate bad breath by killing bacteria and neutralizing foul-smelling odors.

Sometimes recurring bad breath can be an indication of other health problems, so it is wise to talk to your dentist or physician to determine the cause.

For a **free sample** of one of our alcohol-free fresh breath products, please stop by our office.
