

# DENTISTRY

**Dr. Jeff Danner**

## What can I expect at a routine visit to the dentist?

When you visit your dentist, a comprehensive visit should include the following:

- Diagnodent laser scans to detect decay on biting surfaces of teeth
- Digital x-rays to check for bone loss/ gum disease and decay between teeth
- Neuromuscular evaluation
- Evaluation of gum tissue for presence of infection
- Examination of occlusion (your bite)
- Oral cancer screening
- Evaluation of existing restorations
- Photographic evaluation
- Explanation of options for enhancing your smile
- Explanation of recommended preventive treatment
- Personalized homecare instructions
- And most importantly, your dentist should respectfully address your particular needs, and be willing to schedule a separate appointment to discuss any concerns in a comfortable and relaxed environment.

Maintaining a healthy smile is easy when you combine routine dental visits as outlined above with dedicated oral hygiene habits at home.
